I consider the holistic learning environment and excellent mentors of the department as the major contributor for my selection into IIM Ahmedabad. Having had the opportunity to learn about the various business avenues in this ever-growing field, my 4 years at the department has provided me with a strong base as I look to become a Biotech entrepreneur.

In addition to this, I would also like to credit the department for providing a balance of technical and soft skill development. I had a very smooth transition into the corporate world when I was campus placed in GreyB Research due to the continued support the faculty provided during my internship.

I would forever be thankful for the enormous learning I experienced here.

I have been very fortunate to study in UIET, Panjab University. It provided me with a strong technical educational foundation which helped me throughout my educational career. The quality of education it provides along with its superior infrastructure influenced me into taking admission in the university.

Upon my arrival I was greeted with the serenity of PU campus and was really excited to see students comprising of various cultures from all over the country.

One thing I would have to mention is the student teacher relationship which is seen here as a cultural norm, it helped me to succeed as a person both personally and professionally.

Manager-Business Development,
Biocon Ltd.
gaganjot.mdi@gmail.com

Having joined UIET in 2005, when the first ever batch from the institute had just graduated, pursuing the field of Biotechnology while it was on the threshold of gaining prominence in multiple business fields, I truly believe that the 4 years I spent here were years of gaining self-realisation, maturity and growth, not only for me but for the department, the institute and the field of Biotechnology as well.

While the field was still gaining footholds, the Biotechnology department at UIET was amongst the best placed to impart technical knowledge to us students due to the excellent mentors and supporting infrastructure of not just the institute but also of PU.

In addition to the technical teaching, there was a lot of peer learning that happened at UIET which developed the soft skills of us students and these have held me in good stead in the corporate field.

The technical training that I gained here coupled with the business understanding from my PGPM have been my assets in my professional journey in the bio-pharmaceutical space.

My time here was certainly a period of personal growth, learning, lots of fun building lifelong friendships, all of which have contributed significantly into shaping me into who I am today."

It is my pleasure to bring on record that UIET was one of the best experience of my life. My Engineering at UIET played a significant role to gain clarity of thought, knowledge, confidence, courage and conviction to me and my goals.

Faculty contributes significantly to your knowledge base at UIET.

I got placed at PerkinElmer, dream company of many thanks to UIET. The skills and knowledge I gained at UIET are still helping in my career growth and I owe my success to Panjab University

I presently feel proud of being alumni of UIET.
